DHQ Dataset: Data Dictionary

Section 1: Identifiers

Variable	Label	Description	Format Text
plco_id	PLCO ID		Char

Section 2: DHQ Compliance

Variable	Label	Description	Format Text
age_dhq	Age at DHQ	Calculated using date completed DHQ and DOB.	Numeric .="Missing Data"
dhq_compdays	Days Until DHQ Completion	Days from randomization until date completed DHQ	Numeric .="Missing Data"
dhq_completed	Completed DHQ?		0="No" 1="Yes"
dhq_completedvalid	Completed Valid DHQ?	Valid DHQ if: date of completion provided (exc_nodate_dhq) and alive when completed (exc_death_dhq) and not missing 8+ frequency responses (exc_freq_dhq) and not extreme calories (exc_kcal_dhq)	0="No" 1="Yes"
exc_death_dhq	Died Before DHQ Completion?	Flags participants who were deceased prior to completion of the DHQ.	.="Missing" 0="No" 1="Yes"
exc_freq_dhq	8 or More Missing/Multiple Frequency Responses on DHQ?	Flags participants who missed 8 or more frequency responses	.="Missing" 0="No" 1="Yes"
exc_kcal_dhq	Extreme kCal Consumption on DHQ?	Flags participants in the first and last percentile by gender	.="Missing" 0="No" 1="Yes - 1st percentile" 2="Yes - last percentile"
exc_nodate_dhq	Missing DHQ Completion Date?	Flags participants with no date of completion of the DQX	.="Missing" 0="No" 1="Yes"
entryage_dhq	DHQ Analysis Entry Age	Age at DHQ analysis entry	Numeric .F="No Form"
entrydays_dhq	DHQ Analysis Entry Days	Days from the date of randomization until participant has been randomized and completed the BQ and DHQ	Numeric .F="No Form"

Section 3: DHQ Nutrients: Total

Variable	Label	Description	Format Text
tot_b12_dhq	Vitamin B-12 from Diet and Supplements (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_b6_dhq	Vitamin B-6 from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_betacarot_dhq	Beta-Carotene from Diet (NDS-R) and Supplements (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_cal_dhq	Calcium from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_copper_dhq	Copper from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_fol_csfii_dhq	Folate from Diet (Post-Fortification) (CSFII) and Supplements (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_fol_ndsr_dhq	Folate from Diet (Post-Fortification) (NDS-R) and Supplements (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_iron_dhq	Iron from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_mag_dhq	Magnesium from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_niac_dhq	Niacin from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_ribo_dhq	Riboflavin from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_selenium_dhq	Selenium from Diet (NDS-R) and Supplements (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_thia_dhq	Thiamin from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_vitaiu_csfii_dhq	Vitamin A from Diet (CSFII) and Supplements (i.u./day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"

Variable	Label	Description	Format Text
tot_vitc_dhq	Vitamin C from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_vitd_dhq	Vitamin D (Calciferol) from Diet (NDS-R) (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_vite_csfii_dhq	Vitamin E from Diet (CSFII) and Supplements (mg/day of Alpha-Tocopherol Equivalents) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
tot_zinc_dhq	Zinc from Diet and Supplements (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"

Section 4: DHQ Nutrients: Diet

Variable	Label	Description	Format Text
dt_alc_alc_drinks_dhq_f	Alcohol from Beer, Wine, and Liquor (g/day) - Past 12 Months - DHQ (Final)	See Appendix 2: Alcohol (DHQ) See Appendix 1: Nutrients (DHQ)	Numeric .F="Missing DHQ Form" .M="Missing Data"
dt_alc_beer_dhq_f	Alcohol from Beer (g/day) - Past 12 Months - DHQ (Final)	See Appendix 2: Alcohol (DHQ) See Appendix 1: Nutrients (DHQ)	Numeric .F="Missing DHQ Form" .M="Missing Data"
dt_alc_dhq	Alcohol from Diet (g/day) - DHQ	See Appendix 2: Alcohol (DHQ) See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_alc_liquor_dhq_f	Alcohol from Liquor (g/day) - Past 12 Months - DHQ (Final)	See Appendix 2: Alcohol (DHQ) See Appendix 1: Nutrients (DHQ)	Numeric .F="Missing DHQ Form" .M="Missing Data"
dt_alc_wine_dhq_f	Alcohol from Wine (g/day) - Past 12 Months - DHQ (Final)	See Appendix 2: Alcohol (DHQ) See Appendix 1: Nutrients (DHQ)	Numeric .F="Missing DHQ Form" .M="Missing Data"
dt_alpha carot_dhq	Alpha-Carotene from Diet (NDS-R) (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_b12_dhq	Vitamin B-12 from Diet (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_b6_dhq	Vitamin B-6 from Diet (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_beta carot_dhq	Beta-Carotene from Diet (NDS-R) (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_beta carot_eq_dhq	Beta-Carotene Equivalents from Diet (NDS-R) (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_beta cry_dhq	Beta-Cryptoxanthin from Diet (NDS-R) (mcg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_beta toco_dhq	Beta-Tocopherol from Diet (NDS-R) (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_caffeine_dhq	Caffeine from Diet (NDS-R) (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ), See Appendix 3: Caffeine (DHQ)	Numeric .="Missing Data"
dt_cal_dhq	Calcium from Diet (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_carb_dhq	Carbohydrate from Diet (g/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_carot_dhq	Carotenes from Diet (mcg/day of Retinol Equivalents) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_chol_dhq	Cholesterol from Diet (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_copper_dhq	Copper from Diet (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"

Variable	Label	Description	Format Text
dt_deltatoco_dhq	Delta-Tocopherol from Diet (NDS-R) (mg/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_fa10_0_dhq	Fatty Acid 10:0 from Diet (g/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"
dt_fa12_0_dhq	Fatty Acid 12:0 from Diet (g/day) - DHQ	See Appendix 1: Nutrients (DHQ)	Numeric .="Missing Data"

Appendix 1: Nutrients (DHQ)

Appendix 1: Nutrients (DHQ)

The DHQ nutrient variables are calculated from the questionnaire responses by the DietCalc software, which takes into account food frequency, serving size, and other responses (e.g. How often were these soft-drinks diet or sugar free?) and uses these in conjunction with a nutrient database based on national dietary data (USDA's 1994-96 Continuing Survey of Food Intakes by Individuals [CSFII], available from the USDA Food Surveys Research Group, or the Nutrition Data Systems for Research (NDS-R) from the University of Minnesota, which has nutrient values not available from the USDA Survey Nutrient Database) to calculate the daily intake of all nutrients in the database.

The DHQ differs from the DQX in that the food frequency questions don't always match one-to-one with items in the nutrient database; in some cases modifying questions on the questionnaire determine what item or items in the database are used for calculating nutrient amounts. However, the basic process is the same – food frequencies are multiplied by nutrient amounts in the database which are based on gender and serving size, and the resulting nutrient amounts are summed across all foods to get a total daily value for each nutrient.

For seasonal food frequencies, the food frequency is first multiplied by a seasonality factor as shown below:

Summer, Winter: 0.333

Not summer or not winter (rest of year): 0.667

In season: 0.25

Out of season: 0.75

For more information about the DHQ nutrient database, go to <http://riskfactor.cancer.gov/DHQ/database/index.html> .

For a list of which nutrients were derived from the CSFII, and which were derived from the NDS-R, go to

<http://riskfactor.cancer.gov/DHQ/database/nutrient.html> .

Total fat, saturated fat, monounsaturated fat, and polyunsaturated fat have all been broken down into plant and animal groups (with animal further subdivided into meat, fish, eggs, and dairy as well), based on percentages in a spreadsheet provided by NCI investigators.

Appendix 2: Alcohol (DHQ)

Appendix 2: Alcohol (DHQ)

Questions 8-10 of the DHQ form ask participants about their current alcohol drinking (within the 12 months prior to DHQ). Question 156 asks participants about their drinking history (Ages 18-24/25-39/40-54/55+).

The current drinking amounts are found in three sections of the data dictionary. "Section 9: DHQ Foods: My Pyramid Equivalents" includes current MPEDs (e.g., mped_alc_bev_alc_drinks_dhq_f). "Section 5: DHQ Nutrients: Diet" includes current grams of alcohol (e.g., dt_alc_alc_drinks_dhq_f). "Section 8: DHQ Foods" includes current pyramid servings (p_alc_dhq_f).

Lifetime drinking, drinking history, and drinking status incorporate data from Question 156. This data is found in "Section 21: DHQ Drinking History". The variables in this section are unique because they are the only DHQ variables pertaining to a participant's diet history more than 12 months prior to the questionnaire. All the other DHQ variables pertain to a participant's current diet within the 12 months prior to DHQ.

Section 21 includes drinking status variables. The variable drinker_status_dhq_f indicates whether the participant is a current/former/never drinker. The variable drinker_dhq_f indicates whether the participant is a current drinker.

Section 21 also includes drinking history (Ages 18-24/25-39/40-54/55+) MPED variables. For example, mped_alc_bev_beer25_dhq_f is the MPEDs of alcohol from beer per day for "Ages 25-39".

*****Lifetime Alcohol*****

The lifetime alcohol variable (mped_alc_bev_lifetime_dhq) is also included in "Section 21: DHQ Drinking History". It represents the average MPEDs of alcohol (drinks/day) from age 18 to DHQ completion.

*****The 2023 Lifetime Alcohol Variable and Data Cleaning Effort*****

The lifetime alcohol variable was generated in 2023 after the completion of a data cleaning effort, which cleaned missing and ambiguous responses to alcohol questions. As a result of the cleaning effort, updated alcohol variables were generated, which are indicated by the suffix "_f". A small number of current drinking amount variables were not part of the data cleaning effort, including MPED alcohol amounts that include food sources; alcohol + non-alcohol grams of beer/wine/liquor; and HEI variables that use alcohol as a source.

Servings, serving sizes, caffeination, and diet questions were asked for soda, coffee, and tea. The variables that have been derived from these questions are listed below according to the section where they can be found in the data dictionary.

Appendix 4: Flavonoids

Appendix 4: Flavonoids

Flavonoid and isoflavonoid variables are all mg/day. These flavonoid variables are “50%” variables, meaning that, for the purpose of deriving the nutrient database values, amounts for processed foods were assumed to be 50% of the raw food or foods. This was done to account for flavonoid losses due to processing.

See Appendix: Nutrients (DHQ) for more details regarding the calculations.

Appendix 5: Glycemic Index and Glycemic Load (DHQ)

Appendix 5: Glycemic Index and Glycemic Load (DHQ)

Glycemic load is defined as the grams of available carbohydrate in the food multiplied by the food's glycemic index / 100. The glycemic load was calculated in the same way as other Nutrients that is, the nutrient database contained an amount for each line item based on gender and serving size where applicable. This amount was multiplied by the frequency with which the subject reported consuming the item, and the glycemic load for all items was added together and converted to a total daily value. See Appendix: Nutrients (DHQ) for more details.

The glycemic index for each subject was calculated as a weighted average of the foods they ate by multiplying the subject's daily glycemic load by 100 and dividing by their daily "available" carbohydrate consumption. Available carbohydrates were defined as total carbohydrates – total dietary fiber (dt_fiber_csfii_dhq was used for this purpose).

Appendix 6: Pyramid (DHQ)

Appendix 6: Pyramid (DHQ)

The DHQ pyramid serving variables are calculated in the same manner as the nutrient variables using amounts based on the US Department of Agriculture's pyramid servings, which are stored in the same gender and serving size-specific database as the nutrients. These variables represent standardized servings of food groups from all sources. See Appendix: Nutrients (DHQ) for more details regarding the calculations.

For additional information regarding the DHQ pyramid food groups, go to <http://riskfactor.cancer.gov/DHQ/database/pyramid.html> .

Appendix 7: MPED (DHQ)

Appendix 7: MPED (DHQ)

MPED (My Pyramid Equivalents Database) variables were calculated in the same manner as the nutrient and pyramid variables using amounts based on the US Department of Agriculture's updated version of the Pyramid Servings Database (PSD). The MPED variables align with the 2005 Dietary Guidelines for Americans and USDA's 2005 Food Guidance System, MyPyramid.

The major difference between the MPED and the PSD is that the units of the variables are now "ounce equivalents" and "cup equivalents," rather than "servings." Additionally, MPED provides four new variables (oils, solid fat, high omega 3 fish, low omega 3 fish) and incorporates improvements regarding how some ingredients and foods are classified.

See Appendix: Nutrients (DHQ)

See Appendix: Pyramid (DHQ)

Appendix 8: Grams (DHQ)

Appendix 8: Grams (DHQ)

The DHQ gram variables are calculated using the detailed analysis file output by DietCalc, which lists the daily gram amounts for each food and question, as calculated by DietCalc from the coded responses to each food frequency and serving size question. In some cases more than one question contributed to the gram amount for a food, so the variables were calculated by summing the gram amounts by food for each subject.

DietCalc determines the gram amounts by gender and serving size (small, medium, large, or overall) using a nutrient database based on national dietary data (USDA's 1994-96 Continuing Survey of Food Intakes by Individuals [CSFII], available from the USDA Food Surveys Research Group, or the Nutrition Data Systems for Research (NDS-R) from the University of Minnesota, which has nutrient values not available from the USDA Survey Nutrient Database).

The meat group variables g_redmt_dhq and g_whitemt_dhq simply sum up the gram amounts for red meat and white meat (chicken, poultry, and fish, including shellfish, plus a percentage of lowfat sausage and hotdogs), respectively. A few of the items on the questionnaire were considered "mixed dishes", and for these items, a percentage of the gram amounts were counted towards total meat and either red or white meat, as shown below:

Chili: 20.9% (red)
Lasagna: 10.3% (red)
Pizza w/ meat: 15.6% (red)
Pasta w/ meat sauce: 9% (red)
Ground beef mixtures such as meatballs or meat loaf: 76.6% (red)
Beef stews/pot pies: 25.5% (red)
Lowfat sausage: 50% (white)
Lowfat hot dogs: 50% (white)

Appendix 9: Meat Cooking Gram Variables (DHQ)

Appendix 9: Meat Cooking Gram Variables (DHQ)

Cooking method and/or doneness questions were asked on pages 12 and 13 of the DQX for steak, hamburgers, chicken, pork chops, bacon, and sausage, and these responses were used to create gram variables by cooking method and doneness for these meats. Where responses were missing, the most common cooking method or doneness levels were used. Pork chops were assumed to be well done, and bacon and sausage pan-fried.

Appendix 10: Food Frequency Responses (DHQ)

Appendix 10: Food Frequency Responses (DHQ)

Frequency responses indicate how often the subject consumed a particular food without regard to portion size. The DHQ food frequency variables are calculated using the detailed analysis file output by DietCalc, which lists the daily frequency for each food and question, as calculated by DietCalc from the coded responses to each food frequency question. In some cases more than one question contributed to the daily frequency for a food, so the variables were calculated by summing the daily frequencies by food for each subject.
